

**FOR IMMEDIATE RELEASE:
IO Informatics' Sentient™ Software Validated On Dell Systems -**

Berkeley, California - April 21, 2010 - IO Informatics, Inc. is honored to be a Dell ISV Certified Partner and to have its Sentient Suite validated as part of Dell's ISV Partner Program. This validation means that Dell's customers worldwide can be assured that the IO Informatics' Sentient Suite has been tested and has met Dell standards for integration. In addition, customers will be able to license IO Informatics' products through the Dell S&P (Software and Peripherals) program.

IO Informatics and Dell share a mutual commitment to deliver exceptional value to our healthcare and life science research customers. Together with IO Informatics, we provide a turnkey solution that helps customers integrate heterogeneous data to extract knowledge and solve project management problems, said Scott Jenkins, VP of Solutions Sales for Dell's Healthcare & Life Sciences Group. The Dell ISV Partner Program is focused on simplifying the management of disparate infrastructure platforms, applications and IT services. As an ISV Certified Partner, IO Informatics provides a seamless integration of IO products on Dell hardware. Dell has validated this functionality and found that the implementation performs to Dell standards.

"We are very happy to have achieved this status with Dell, and feel it is a testimony to the strong value the Sentient Suites offers to Dell's customers," said Robert Stanley, president and CEO of IO Informatics. "Health care and Life Science data management and integration are key initiatives for Dell, and helping customers best integrate, manage and explore their data is our focus at IO Informatics. Today's announcement highlights the intersection of these goals to benefit our mutual customers."

The Sentient Suite integrates its users' data, applications, databases, and instruments into one secure, compliant and interoperable environment. Users can now access, query, and use data from multiple sources regardless of format and location, using Dell hardware and IT infrastructure. Administrators and end-users can define data-driven informatics applications without programming. Semantic technology makes it practical to rapidly create and connect "bottom-up" experimental data networks to "top-down" published knowledge networks. This technology makes it possible to create and apply knowledge more efficiently and effectively than was previously possible.

About IO Informatics

IO is at the forefront of the semantic technology wave. The company provides software and services for uniquely efficient data integration and transformative knowledge applications in life sciences, biotechnology, pharmaceutical, and medical environments.
